Redditch Needle Facts

• In 1850, needles could be exchanged for a wife in Sudan.

• North American Indians bartered land for packets of needles.

• At the turn of the century, Redditch was the undisputed capital of needle making in the world. There is a story which says when the Japanese commenced making needles they named a suburb of Tokyo 'Redditch' so that they could legitimately print 'Made in Redditch' on the needle packets!

• There is another story that a foreign manufacturer sent a hypodermic needle to Redditch claiming it was the smallest in the world. It was sent back to the manufacturer with a Redditch needle threaded inside it!

• Sir John Evans, a notable 19th Century archaeologist, rewarded workmen who found flint implements with packets of Redditch needles. These were particularly prized in France.

Guide to Needles

Sharps

For plain sewing. SHARPS is the name of the most commonly used kind of needle.

Between / Straw

Between - The tailor's needle. The same as SHARPS, but shorter. (Experts sew with these short needles.)

Straw - The milliner's needle. The same as SHARPS, but longer.

Crewel

For embroidery. The same as SHARPS, but with longer eyes to make flossy embroidery silks.

Darners / Double Long Darners

Darners - For mending holes. A long needle with a large eye to take the fluffy wools used in darning.

Double Long Darners - For mending large holes in thick woollen garments.

Chenille and Tapestry

Extra large eyes to take the thick wools used in 'GROS POINT' and 'PETIT POINT' work. TAPESTRY and CHENILLE are alike except that Tapestry points are blunt; Chenille, sharp.

In Sharps, Between, Straw, Crewel and Darners the thickest size usually employed is size 1, the thinnest (and shortest) is size 10. In Double Long Darners the thickest size is 14; and the thinnest size 6.

The illustrations are much enlarged.
